

# STAINLESS SELF TAPPING FACADE SCREW, A

SCREW FOR FASTENING OF CLADDING TO WOOD OR STEEL

- Good corrosion resistance (stainless steel A2)
- Tall head for easy and stable mounting
- Supplied with washer with bonded EPDM for better load distribution and sealing abilities
- Available in more than 500 colours (QUALICOAT certified powder)

## PRODUCT RANGE

Hex head

Corrosion category C4

Stainless steel A2

**INSTALLATION INSTRUCTIONS**

For optimal performance it is important to follow the installation instructions. An incorrect installation may lead to decreased sealing abilities and/or load bearing capacity.

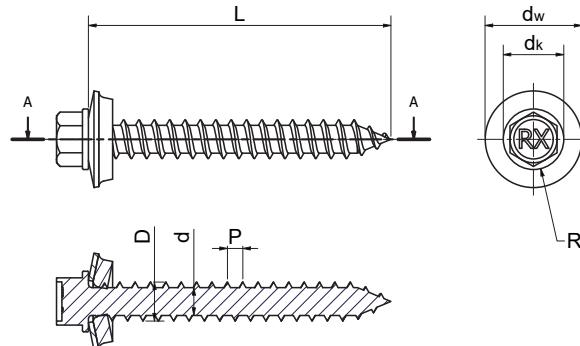

See the chart below for predrilling in different steel thicknesses.

**DESIGN RESISTANCE**

The design resistance of the screw is determined in accordance with EN 1993-1-3:2006 + AC:2009, Eurocode 3 for steel structures and EN 1995-1-1:2004 + AC:2006 + A1:2008 + A2:2014, Eurocode 5 for timber structures.

The resistance when loaded in tension,  $N_{Rd}$ , appears from the table on the right and is the minimum value of the pull-out resistance of the supporting object, the pull-through resistance of the fixed object, and the tension resistance of the screw.

The resistance when loaded in shear,  $V_{Rd}$ , appears from the table on the right and is the minimum value of the bearing resistance of the supporting object and the fixed object, and the shear resistance of the screw.

The theoretical values must be considered indicative since the conditions at the construction site may vary. Practical tests of the specific application are recommended for verification of the listed values.

Assumptions:

Fixed object: Steel S280GD - EN 10346

Supporting object: Structural wood, C24

Density,  $\rho_k = 350 \text{ kg/m}^3$

$L$  = Length of the screw [mm]

$t$  = Thickness of the fixed object [mm]

All resistances are stated in kN (1 kN ≈ 100 kg)

Safety factor:  $\gamma_M = 1.35$ ,  $k_{\text{mod}} = 0.90$
