Product

Product description / Product definition

This EPD describes High-pressure decorative compact laminates according to /EN 438-4/ (Compact HPL, thickness ≥ 2 mm) with a density of at least 1350 kg/m³.

High-pressure decorative compact laminates are characterised by their aesthetic qualities, strength, durability and functional performance. Compact HPL sheets are available in a wide variety of colours, patterns and surface finishes. They are resistant to wear, impact, scratching, moisture, heat, staining and light and possess good hygienic and -antistatic properties. Compact HPL are easy to clean and maintain.

Compact HPL can be glued, riveted or screwed on wooden or metallic substructures or anchored in

High Pressure Compact Laminate

Owner of the Declaration

ICDLI aisbl – International Committee of the Decorative Laminates Industry Rue de la presse 4 1000 Brussels/Belgium Headoffice: Städelstraße 10 60596 Frankfurt am Main/Germany

Declared product / Declared unit

Decorative High-Pressure Compact Laminate (HPL) according to /EN 438-4/ produced by ICDLI aisbl members. The EPD applies to 1 m² of Compact Laminate Panels without fire-retardant properties with an average density of 1350 kg/m³.

Scope:

The applicability of this document is restricted to Compact Laminates produced by member companies of the Laminate Association ICDLI aisbl. Data has been provided by 12 member Compact producing companies of the ICDLI aisbl for the year 2016. These companies represent 80 % of the ICDLI aisbl members. The production volume of these companies contributes more than 45% to the Decorative High-pressure Compact laminates production in Europe.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Verification

according to /ISO 14025/

internally x externally

Stefen 2

Dr. Stefan Diederichs (Independent verifier appointed by SVR)

mechanical fastening brackets to be used in invisible mounting systems.

Dimensions: Length: up to 5600 mm Width: up to 2200 mm

Thickness $2 \le t < 40$ mm (Compact HPL, /EN 438-4/) A large number of HPL manufacturing plants are certified to /ISO 9001/ and/or /ISO 14001/.

Product according to the /CPR/ based on a hEN: For the placing on the market of HPL Composite Panels in the EU/EFTA (with the exception of Switzerland) Regulation (EU) No. 305/2011 (/CPR/) applies. HPL Composite Panels needs a Declaration of

Performance taking into consideration /EN 438-7/ and the CE-marking. For the application and use the respective national provisions apply.

Application

High-pressure decorative compact laminates can be used for private and -residential housing, hospitals and laboratories, public buildings, -railway stations, airport terminals/infrastructure, transportation, -hotels, education, retail and commercial buildings, sport & recreation centers and industrial buildings. The performance properties of compact HPL make them suitable for use in a wide variety of interior applications such as: wall cladding, railing infill panels, furniture, tables, desks, column cladding and lab equipment, cubicles, ceilings, window sills, worktops, counter tops, wash basins, etc.

Technical Data

An extract of the technical properties of Compact HPL according to EN 438 part 4 is given in the following tables. For general purpose Compact HPL used in products without flame retardants, the following properties are given.

Constructional data

Name	Value	Unit
Gross density	≥ 1350	kg/m ³
Resistance to abrasion (IP) acc. to /EN 438/	≥ 150	U
Resistance to scratches acc. to /EN 438/	≥2	Degree
Flexural strength acc. to EN 483	≥ 80	N/mm2
Modulus of elasticity acc. to /EN 438/	≥ 9000	N/mm ²
Light resistance acc. to /EN 438/	≥4	-
Dimensional deviation : Thickness tolerance	± 0.4	mm

LCA: Calculation rules

Declared Unit

The declared unit is 1 m² of Compact HPL with 8 mm thickness and a density of at least 1350 kg/m³. The declared unit refers to the Compact HPL products manufactured with phenolic impregnated kraft paper core and melamine impregnated decor paper. Special decors, fire retardants or alternative core production technologies are not included. The declared unit refers to the average Compact HPL products manufactured by ICDLI aisbl members (weighted average).

Declared unit

Name	Value	Unit
Declared unit	1	m ²
Grammage	10.8	kg/m ²
Conversion factor to 1 kg	0.0926	-

System boundary

Type of EPD: Cradle-to-gate with options.

Considered product stages:

 Production of pre-products (e.g. resin ingredients and papers), extraction of energy carriers, raw material transportation, manufacture of product and packaging

Dimensional deviation: Length	+10/-0	mm
and width	+10/-0	mm

- Performance data of HPL Composite Panels in accordance with the Declaration of Performance (DoP) with respect to its Essential Characteristics according to /EN 438-7/ apply.
- Voluntary data: /EN 438-4/

Base materials / Ancillary materials

More than 60 % of the Compact HPL consists of paper, and the remaining 30 to 40 % consists of cured phenol resin for core layers and melamine resin for the surface layer. Compact HPL is produced in a high-pressure process. Papers are impregnated with thermosetting resins and pressed together under simultaneous application of heat (temperature > 120 °C) and high specific pressure (\geq 5 MPa). This method produces a homogeneous, nonporous material with a density \geq 1350 kg/m³.

Compact Laminates typically have two decorative sides.

For packaging the materials cardboard, wood/wooden pallets and polyethylene film are used.

Reference service life

Due to the wide range of applications no single reference service lifetime can be established. For information, the service life in standard applications can range from 20 to 50 years (ICDLI aisbl suggestion based on expert judgment).

> materials are declared in the modules A1-A3. Modules A1-A3 also include the manufacturing and supply of energy.

- The scenario for the transport of the product to the construction site is declared in module A4.
- The end-of-life scenarios include transportation to the waste processing and disposal (C2), emissions and energy requirements of combustion (C3; in case of scenario 1) and landfilling process (C4; in case of scenario 2). Credits for electricity and thermal energy, which result from energy recovery in modules C3 and C4, are declared in module D.
- The CO2 incorporation is taken into account. The C-balance is closed due to consideration of biotic CO2 emissions according to the incorporation on input side.

The data collected by the manufacturers is based on yearly production amounts. The production data refers to the yearly consumption in 2016.

Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared

LCA: Scenarios and additional technical information

The following technical information is a basis for the declared modules. This information can also be used for developing specific scenarios in the context of a building assessment for modules that are not declared (MND).

Transport to the building site (A4)

Name	Value	Unit
Transport distance	100	km
Capacity utilisation (including empty runs)	70	%
Gross density of products transported	1350	kg/m³
Capacity utilisation volume factor	1	-

Packaging material:

81 g polyethylene film, 52 g cardboard, 600 g wood (from pallets) proportional per 1 m² HPL compact product.

End of life (C2-C4)

The transport to waste processing (module C2) is assumed to be 50 km. This scenario is valid for both EoL scenarios.

Name	Value	Unit
Collected separately	10.8	kg
Energy recovery	10.8	kg
Landfilling	10.8	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information

Scenario 1: Module D/1 includes the potential benefits in form of energy recovery of the incineration process C3/1 (incineration of HPL compact). A waste incineration plant with R1-value > 0.6 is assumed. Scenario 2: Landfilling with potential benefits in D/2 by use of landfill gas for electricity generation. Effort for landfilling process in C4/2. were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account. GaBi ts serves as background database for the calculation /Gabi ts/.

LCA: Results

The following tables display the environmental relevant results according to /EN 15804/ for 1 m² HPL compact. The two End-of-Life Scenarios are represented in modules C2 to C4 and D. Scenario 1 reflects the thermal treatment of HPL compact

with energy recovery. Scenario 2 shows the environmental results in case of disposal on landfill.
