

Soil Vent 15-50°

Cowl for soil vent pipes

Description :

The soil vent cowl is uninsulated and has a flexible pipe that can be adjusted from 50 mm to 110 mm and can be connected to ventilation from toilets, laundry rooms, bathrooms etc.

The cowl is designed to direct rainwater away from the ventilation opening. The product is equipped with a grille to keep out leaves and other debris, and is supplied mounted on a base plate that fits the Isola Roofing Shingles.

Application :

For ventilation from toilets, laundry rooms and bathrooms.

Installation :

Install the roofing shingles up to the front edge of the cowl. Install the soil vent cowl. Apply two strips of Isola Sealant, then place the roofing shingles on the collar of the cowl.

For more details see laying instruction on our website.

Storage :

When storing in sunlight, the soil vent cowl should be unpacked from the plastic.
