

# MEMBRA® Finishing Tape

Tape for Membra® membrane system

## Description :

Membra Finishing Tape is a self-adhesive fabric based on PE foam with a PP felt on the top. The adhesive panel is protected with silicone-treated tear-off foil. The tear-off foil is divided in two for easy and safe installation. The membrane fabric is both waterproof and diffusion-impermeable, and together with other system components provides a safe and secure membrane solution.

## Application :

Membra Finishing Tape is part of the Membra Wet Room System. The product is used to ensure that the membrane system has a robust and waterproof end on the wall. The tape provides excellent adhesion to solid substrates such as concrete, screed, wet-room panels, plasterboard and waterproof wood boards approved for use in wet rooms etc.

## Storage :

Dry and protected from UV

## Approvals and guarantee

## Installation :

Membra Finishing Tape is installed in complete lengths along edges where the membrane system is not being fitted from floor to ceiling or from wall to wall. Measure and cut ready lengths. Remove one foil first and affix that part along the end of the membrane. Then remove the other foil and affix that part of the tape to the wall in the same way. Use a profiling tool to push the gasket firmly onto the substrate. See separate installation instructions.

NB: The substrate must be firm, clean, dry and free from grease. Always prime absorbent substrates first with Membra Adhesive Primer.

For more details see laying instruction on our website.

## Accessories for :

MEMBRA® Membranduk
