European Technical Assessment

ETA-12/0293 of 29/09/2017

English translation prepared by CSTB - Original version in French language

General Part

Nom commercial *Trade name*	**ESSVE façade plug grey extra long**
Famille de produit *Product family*	**Cheville plastique pour usage multiple dans le béton et la maçonnerie pour applications non structurales** ***Plastic anchor for multiple use in concrete and masonry for non-structural applications***
Titulaire *Manufacturer*	ESSVE Produckter AB SE-164 07 Kista Esbogatan 14 Sweden
Usine de fabrication *Manufacturing plants*	Plant 403-1
Cette evaluation contient: *This Assessment contains*	13 pages incluant 10 pages d'annexes qui font partie intégrante de cette évaluation 13 *pages including 10 pages of annexes which form an integral part of this assessment*
Base de l'ETE *Basis of ETA*	ETAG 020, Version Mars 2012, utilisée en tant que EAD *ETAG 020, Edition Mars 2012 used as EAD*
Cette evaluation remplace: *This Assessment replaces*	ATE-12/0293 valide du 14/06/2012 au 14/06/2017 ETA-12/0293 with validity from 14/06/2012 to 14/06/2017

Specific Part

1 Technical description of the product

The ESSVE façade plug grey extra long GX-L is an anchor consisting of a special screw and a polymeric sleeve which passes through the fixture. The special screw is made of galvanized steel or stainless steel, whereas the sleeve consists of polyamide PA6. The polymeric sleeve is expanded by screwing in the expansion element which presses the sleeve against the wall of the drilled hole.

The installed anchor is shown in Annex A.

2 Specification of the intended use

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annexes B.

The provisions made in this European Technical Approval are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product

3.1 Mechanical resistance and stability (BWR 1)

For Basic Requirement *Mechanical resistance and stability* the same criteria are valid as for Basic Requirement *Safety in use*.

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	See Annex C1

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances contained in this European technical approval, there may be requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Directive n°305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

Essential characteristic	Performance
Characteristic Resistances of the screw for tension and shear loads and bending moments in concrete and masonry	See Annex C1
Characteristic Resistance of the plastic expansion sleeve in concrete	See Annex C1
Characteristic Resistance of the plastic expansion sleeve in masonty	See Annex C1
Displacements	See Annex C3
Anchor distances and dimensions of members	See Annex B2, B3

3.5 Protection against noise (BWR 5)

Not relevant.

3.6 Energy economy and heat retention (BWR 6)

Not relevant.

3.7 Sustainable use of natural resources (BWR 7)

For the sustainable use of natural resources no performance was determined for this product.

3.8 General aspects relating to fitness for use

Durability and Serviceability are only ensured if the specifications of intended use according to Annex B1 are kept.

4 Assessment and verification of constancy of performance (AVCP)

According to the Decision 97/463/EC of the European Commission[1], as amended, the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table apply.

Product	Intended use	Level or Class	System
Plastic anchor for use in concrete and masonry	Plastic anchor for multiple use in concrete and masonry for non-structural applications	—	2+

5 Technical details necessary for the implementation of the AVCP system

Technical details necessary for the implementation of the Assessment and verification of constancy of performance (AVCP) system are laid down in the control plan deposited at Centre Scientifique et Technique du Bâtiment.

The manufacturer shall, on the basis of a contract, involve a notified body approved in the field of anchors for issuing the certificate of conformity CE based on the control plan.

Issued in Marne La Vallée on 29-09-2017 by

Charles Baloche *The original French version is signed*

ESSVE façade plug grey extra long

Annex A3

Product description

Dimensions, Materials, Installation parameters

Specifications of intended use

Anchorages subject to:

- Static and quasi-static loads,
- Multiple fixing for non-structural applications.

Base materials:

- Use category « a » : Reinforced or unreinforced normal weight concrete, cracked or non-cracked, with strength class ≥ C12/15, according to EN 206: 2000-12 ;
- Use category « b » : solid masonry according to Annex C2 ;
- Use category « c »: hollow or perforated masonry according to Annex C2 .
- Mortar strength class of the masonry ≥ M 2,5 according to EN 998-2-2010.
- For other base materials of the use categories « a », « b » or « c », the characteristic resistance of the anchor may be determined by job site tests according to ETAG020, Annexe B, Edition march 2012.

Temperature range:

- a : -20 °C to + 40°C
  (max. short term temperature +40°C et max. long term temperature +24°C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel),
- The specific screw made of galvanized steel may only be used in structures subject to dry internal conditions. These screws may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in such way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e. g. undercoating or body cavity protection for cars).
- Structures subject to permanently damp internal conditions or to external atmospheric exposure including industrial and marine environment if no particular aggressive conditions exist (stainless steel).

Note: Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The design of anchorages is carried out in compliance with ETAG 020, Guideline for European Technical Approval of "Plastic Anchors for Multiple Use in Concrete and Masonry for non-structural Applications", Annex C under the responsibility of an engineer experienced in anchorages.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- The anchor is to be used only for multiple fixing for non-structural applications. according to ETAG 020 Edition March 2012 .

ESSVE façade plug grey extra long	
Intended Use Specifications	**Annex B1**

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site.
- Use of the anchor only as supplied by the manufacturer without exchanging the components of an anchor.
- Anchor installation in accordance with the manufacturer's specifications and drawings prepared for that purpose and using the appropriate tools.
- Checks before placing the anchor to ensure that the characteristic values of the base material in which the anchor is to be placed are identical to the values to which the characteristic loads apply;
- Observation of the drilling method using rotary drilling or hammer / impact drilling as given in Annex C2 (drill bits acc. to ISO 5468).
- Placing drilled holes without damaging the reinforcement;
- Holes to be cleaned of drilling dust
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar.
- The plastic sleeve is inserted through the fixture by slight hammer blows and the special screw is screwed in until the head of the screw touches the sleeve. The anchor is correct mounted, if there is no turn-through of the plastic sleeve in the drill hole and if slightly move is impossible after the complete turn-in of the screw.
- Temperature during the installation of the anchor ≥ 0°C;
- Protection to UV exposure due to solar radiation of the anchor not protected.
