HF6R Work

PRODUCT DESCRIPTION

The Ledlenser HF6R Work is our slim headlamp for regular industrial and trade applications. It comes with a high-quality aluminum housing, three brightness levels and a red front light. Apart from that, the HF6R Work is equipped with a high color rendering index for close-range work. Thanks to our patent-pending Digital Advanced Focus System, the HF6R Work allows virtually seamless focusing. The digital AFS can be used intuitively via Focus Wheel. Protective elements at the front prepare the lamp for demanding applications – thanks to its powerful battery, you can use the HF6R Work for up to eight hours at mid-intensity. Other features include the wall holder as well as various mounting options on helmets.

- Slim, rechargeable headlamp with three brightness levels as well as red front light
- Virtually seamless focusing thanks to our patent-pending Digital Advanced Focus System; intuitive-to-use Focus Wheel
- Protective elements at the front for high impact resistance; suitable for continuous immersion in water (IP68)
- Powerful battery; easily rechargeable via Magnetic Charge System, with battery status indicator
- Flexible thanks to rubberized headband and additional helmet mount and wall holder

FOOTNOTES

The information pertaining to scope of delivery, appearance, performance, dimensions and weight corresponds to the information available at the time of publication. In the interest of product development, we reserve the right to change scope of delivery, appearance, design and color without prior notice. Product images may vary from the actual products and may show optional accessories which can be purchased separately. Errors and omissions excepted.

1) Measurement values according to ANSI FL1 in the respective setting. If no setting is explicitly indicated, the values refer to luminous flux (lumens/lm) and lighting range (meters/m) on the highest setting, and to battery duration (hours/h) on the lowest setting. A boost function (if available) can be used several times, but only for short periods of time. If the light is equipped with (a) colored LED(s), the measurement values are given for the white light or the white LED. If the light has different energy modes, the measurement is made based on the "energy saving mode".

2) Calculated capacity value in watt-hours (Wh). This applies to the delivery state of the battery/ies inside the respective item, or for lights with rechargeable battery/ies, to the rechargeable battery/ies inside the product when fully charged.

5) Charging time varies by hardware used.
