

NALCO 73551 ANTIFOULANT AND DEPOSIT CLEANER

Product No. L73551

Antifoulant and Deposit Cleaner

NALCO® 73551 Antifoulant and Deposit Cleaner is a non-ionic compound used to remove and disperse "soft foulant" (biofilm-enmeshed mud, silt and clay) deposits in cooling water systems including once through sea water, cooling tower fill, condenser water-side tubes and tube-side heat exchangers. NALCO 73551 demonstrates superior cleaning action through a combination of chemical solubilisation and physical scrubbing by entrained air bubbles.

Why Bioguard Plus cannot be delivered in the US and Canada

Due to the difference in Biocide regulation in Europe and US & Canada there are many biocides registered in one area but not in both. In the case of Bioguard this product is registered in EU countries but not in the US & Canada.

This means that we are not allowed to deliver Bioguard Plus in US & Canada under the current Biocide regulation as it is not registered in the US or Canada. To manage this we have an alternative non biocidal product we can supply and sell in US & Canada.

The product we supply in US & Canada is called Nalco 73551 and has the following benefits:

Benefits

- Dispersant activity
- No requirement for EPA registration as a biocide
- Canadian Food Inspection Agency (CFIA): Authorized use is under category W2 ("Will not come in contact with food products") Broad spectrum antimicrobial

Directions for use

Nalco 73551 can be used to control bacterial fouling in once through sea water cooling systems.

Sea Water Cooling Systems

For control of bacterial fouling in Sea Water Cooling System add this product to the cooling water ensuring uniform mixing at the rate of **100 to 200ml per 100m³** of water flow. The system throughput is either to be determined from the rating of the pump(s) or from the system specifications. Treatment is necessary in coastal waters and should commence three days before entering these waters and continue for three days after leaving coastal waters. The calculated dose should be dosed over a one hour period and repeated every 48 hours.
