

SPECTRUS NX 1100

Alternative product for DieselPower Biocontrol in US & Canada

Information about Biocides

Why DieselPower Biocontrol cannot be sold in the US and Canada

Due to the difference in Biocide regulation in Europe and US & Canada there are many biocides registered in one area but not in both. In the case of DieselPower Biocontrol this product is registered in EU countries but not in the US & Canada.

This means that we are not allowed to sell DieselPower Biocontrol in US & Canada under the current Biocide regulation as it is not registered in the US or Canada. To manage this we have an alternative product we can supply and sell in US & Canada. The product has similar effect on microorganisms and the product we sell in the US & Canada has good effect on both cooling systems and fuel systems that is contaminated.

The product we offer in US & Canada is called Spectrus NX 1100 and has the following benefits:

- Broad spectrum antimicrobial
- Patented blend minimizes microbial resistance
- Nonfoaming, water-based
- Compatible with all corrosion and deposit con-trol treatments
- Synergistic with halogen-based disinfectants
- Contains no copper or iron stabilizers
- FDA approved (CFR 176.170, 180, and 300)
- USDA approved (G-5, G-7)
- Approved for sale in California¹

The application of this product is done through the below process:

For control of bacteria, fungi and algae which causes fouling in hydrocarbon based fuels add this product to the fluid ensuring uniform mixing at the rate of 2 to 10 pounds per 1000 gallons (240 to 1200 ppm) of fluid in the system depending on the severity of the contamination. A badly fouled system must be cleaned before treatment is begun.
